

# **Project**

Learning Record Store

## **What was the project assignment?**

This was a semester long project which we were instructed to create a website course which used the xAPI specification. The site needed to have the following features to receive a passing grade;

1. Facebook/Twitter/Google OAuth
2. Bootstrap elements
3. Dynamic reporting
4. Dynamic implementation of Chart.js
5. Functional Wax LRS backend
6. Live Cloud App

## **What did you learn from the project?**

I learned a lot about how to debug web applications using browser developer tools. I also learned how to read dense JavaScript code. I learned the finer details of how RESTful services work.

## **What would you do differently next time?**

I don't know to be honest. The material was challenging but I did eventually figure everything out and slowly I am starting to learn all the major/popular technologies associated with web development.
